In the US, Growth stocks have outperformed Value stocks in 9 of the past 13 years, opening up a significant gap in cumulative return since 2007. Investors may feel tempted to abandon their allocations to Value in favor of more Growth stocks, but it is important to remember that this kind of style dominance is not uncommon. Since the inception of the Russell indexes in 1979, there have been two "Value eras" (1981-1988 and 2000 2006) and two "Growth eras" (1989-1999 and 2007-2019). Even after including Growth's latest strong run, Value has still outperformed Growth since inception.
